AgriSentinel

END-TO-END AGRI INFRASTRUCTURE × MULTI-AGENT AI

Total Domain Awareness for Next-Gen Agriculture

INNOVATE BHARAT HACKATHON 2026 · AIIS TRACK

Official Work Report

TEAM ID: AIIS200

April 11, 2026 · Sharda University, School of Engineering & Technology

PROJECT OVERVIEW

AI-Driven Credit Scoring + Intelligent Farming Ecosystem for 140M+ Indian Farmers

AgriSentinel is a complete, end-to-end intelligent farming platform that solves three simultaneous crises: crop loss through AI-powered disease detection, financial exclusion through a novel alternative credit scoring engine (AgriScore), and intelligence gaps through a real-time FarmIntel data API. Traditional banks deny loans to farmers lacking formal credit history. AgriScore breaks this barrier — ingesting 40+ agronomic, climatic, soil and technology-adoption features into a trained XGBoost pipeline to generate a holistic score (100–1000) that unlocks fair, data-backed financing. The entire platform is now live, backed by a Supabase PostgreSQL database persisting farmer profiles, scoring history and loan applications in real time.

- Track: AI & Intelligent Systems
- AgriScore: 100–1000 Credit Range
- XGBoost + CNN + Blockchain
- Live Supabase DB Integrated
- FastAPI Backend
- React Frontend

TEAM MEMBERS & CONTRIBUTIONS

AR

Aryan Singh
Team Leader

⭐ Team Lead

- Full system architecture — end-to-end ML pipeline design
- FastAPI backend orchestration and ADK agent integration
- Supabase schema design and project coordination
- Live demo flow and final QA across all modules
- Blockchain AgriScore integration planning

AN

Anant Thakkur
ML Engineer & Data Lead — Maximum Contribution

🏆 Max Contribution

- Aggregated 5+ fragmented datasets (ICRISAT, Rural Credit, Soil NPK, Flood Risk, Smart Farming)
- Feature engineering: *soil_health_index*
- Trained XGBoostRegressor, validated R^2 accuracy, exported .pkl pipeline artifacts
- Built rule-based fallback generator as demo safety net
- Debugged Linux/Kaggle env (path & case-sensitivity issues)
- Seeded Supabase DB with farmer profiles and score data

AI

Anirudh Thapliyal
Backend & API Engineer

Backend

- FastAPI endpoints: /score, /farmer, /history, /diagnose, /chat, /market, /schemes
- CORS, error handling, Uvicorn deployment on Render
- Supabase REST integration (supabase-py) for live read/write
- Loan eligibility logic, risk-band assignment & multiplier rules
- Market analysis agent: dynamic SELL/WAIT engine with ±3% fluctuation simulation

SR

Sribendu Prasad Muduli
Data Engineer

Data

- Rural credit & agro-economic zone dataset sourcing and cleaning
- District-level flood/drought risk annotation pipeline

IS

Ishansh Paliwal
Frontend Developer

Frontend

- React 18 application — CropDoctor, AgriScore, & FarmIntel pages
- Farmer input form (40+ fields), AgriScore result

TV

Tavish Girotiya
Research & QA

Research

- Government scheme & KVK programme deep research & verification
- Mandi baseline prices & crop-yield benchmarks (official sources)

Gov Schemes agent: 10 Indian schemes (PM-KISAN, KCC, eNAM, PKVY...) with fuzzy search

YieldCast agent: yield prediction for 10 crops with confidence & weather impact factor

Supabase zone_lookup & crop_mapping tables

card with risk band visualization

Supabase JS client for live score history display

Language selector (7 Indian languages), mobile-first Tailwind CSS layout

Deployed on Vercel: agrisentinel-nu.vercel.app

End-to-end testing with 10+ dummy farmer profiles across all API endpoints

Presentation slides & demo script preparation

PlantVillage dataset curation (100K+ images, 14 crop types)

DATABASE INTEGRATION — SUPABASE

Live PostgreSQL Database via Supabase — Fully Operational

AgriSentinel is fully connected to a live **Supabase** PostgreSQL database. Every farmer loan application, computed AgriScore, risk-band assignment, and blockchain credit record is persisted in real time. The FastAPI backend writes scoring records on each API call using `supabase-py`, while the React frontend reads live historical scores via `@supabase/supabase-js` — enabling a fully live-data demo experience with no mocking.

`farmers`
Farmer profile, soil & agronomy attributes (40+ columns)

`loan_applications`
Loan request details, eligibility result, multiplier assigned

`score_history`
Timestamped AgriScore records & risk band per farmer

`zone_lookup`
Agro-economic zones, district flood/drought risk metadata

Supabase PostgreSQL | Row-Level Security (RLS) | Real-Time Subscriptions | supabase-py (Backend) | @supabase/supabase-js (Frontend) | Auto-seeded via Anant's scripts

DEVELOPMENT TIMELINE — MATCHED TO HACKATHON PHASES

Phase 1
0 – 4 hrs

Prototype — Data Engineering & AI Model Foundation

5 datasets sourced & merged | soil_health_index engineered | tech_adoption_ratio via regex | 40+ features finalised | CNN disease model initiated (EfficientNetB0) | Kaggle Linux env path bugs fixed

Phase 2
4 – 10 hrs

MVP Launch — Model Training, Agents & Backend

- XGBoostRegressor trained & R^2 validated
- .pkl pipeline exported
- Rule-based fallback safety net built
- FastAPI /score, /diagnose, /chat, /schemes endpoints live
- Gov Schemes agent (10 schemes, fuzzy search)
- YieldCast agent for 10 crops
- Blockchain AgriScore integration initiated

Phase 3
5 – 6 hrs

Scaling — Frontend, Database & Full Agent Suite

- Supabase DB created & all 4 tables seeded
- supabase-py backend connected
- React frontend with 40+ field form built
- CropDoctor page + camera capture + result card
- All 5 agents tested end-to-end via ADK web UI
- CNN model trained on Colab GPU (100K+ images)
- 7-language selector deployed on Vercel

Phase 4
In Progress

Production Polish — Live Demo Ready

- WhatsApp Bot integration (zero install access)
- FarmIntel B2B API (Govt / FMCG / Insurer)
- Immutable blockchain ledger for loan records
- IoT / satellite sensor data pipeline
- Pilot launch with live farmer dataset

PLATFORM FEATURES — SIX AI MODULES

AI Crop Doctor

EfficientNetB0 CNN trained on 100K+ PlantVillage images. 38 disease classes across 14 crops. Upload image → instant diagnosis with confidence score, treatment protocol and prevention steps.

AgriScore Credit Engine

XGBoost model evaluating 40+ farmer features — soil, climate, technology adoption, crop yield. Outputs score 100–1000, risk band (Excellent→Poor), loan eligibility & multiplier.

FarmIntel API

Real-time agri data aggregation layer. Serves actionable insights to governments, FMCGs and insurers. B2B monetization via the growing ₹8,000 Cr+ agri-data market.

WhatsApp Smart Assistant

Zero-install farmer access via WhatsApp API. Mass-adoption driver for rural India — multilingual support in 7 Indian languages. No smartphone app required.

Gov Schemes Agent

Searchable database of 10 Indian agricultural schemes (PM-KISAN, PM Fasal Bima, KCC, eNAM, PKVY, Soil Health Card…) with fuzzy keyword search and eligibility matching.

Blockchain Credit Layer

Tamper-proof farm activity records. Immutable ledger for loan & transaction history. Digital financial identity for farmers — transparent, auditable, regulatory-compliant.

DETAILED WORK COMPLETED

COMPONENT	DESCRIPTION	OWNER	STATUS
CNN Disease Model	EfficientNetB0 trained on PlantVillage (100K+ images). 38 disease classes, 14 crop types. Transfer learning with ImageNet weights on Google Colab GPU. 224×224 resize + normalize pipeline fixed.	Anant	Complete
AgriScore ML Pipeline	XGBoostRegressor on 40+ features. Custom feature engineering: soil_health_index from NPK & pH; tech_adoption_ratio via regex scanning farmer query logs. R^2 validated. .pkl exported.	Anant	Complete
Rule-Based Fallback	Hard-coded score generator activated on ML model error. Ensures zero crashes during live demo. Seamless routing with identical output format as ML endpoint.	Anant	Complete
Supabase Database	4-table PostgreSQL schema: farmers, loan_applications, score_history, zone_lookup. Row-Level Security enabled. Seeded with demo farmer profiles. Real-time subscriptions active.	Anant + Aryan	Complete
FastAPI Backend	/score, /farmer, /history, /diagnose, /chat, /market, /schemes endpoints. CORS configured, image upload with temp storage, supabase-py integrated for all DB operations. Deployed on Render.	Anirudha + Aryan	Complete

COMPONENT	DESCRIPTION	OWNER	STATUS
Market Analysis Agent	Dynamic SELL/WAIT advice engine with ±3% Mandi price fluctuation simulation. Researched baseline prices for major Indian crops from official sources.	Anirudha	Complete
Gov Schemes Agent	10 Indian agricultural schemes with full details, eligibility criteria and fuzzy keyword search. Covers PM-KISAN, PM Fasal Bima, KCC, PM-KUSUM, eNAM, PKVY, Soil Health Card, Drip Irrigation subsidy.	Sribendu	Complete
YieldCast Agent	Crop yield prediction for 10 crops. Accepts district, crop type, and farm conditions. Returns projected yield (tons/hectare), confidence score, weather impact factor, and optimisation insights.	Sribendu	Complete
Data Aggregation Pipeline	Merged Rural Credit, Soil NPK, ICRISAT district-level yield, Smart Farming metrics, and Indian Flood Risk datasets into one master training dataframe. Resolved Kaggle Linux path/case issues.	Sribendu + Anant	Complete
React Frontend	CropDoctor page (camera capture + image upload + result card), AgriScore input form (40+ fields), risk-band visualisation, live score history via Supabase JS client. 7-language selector. Deployed on Vercel.	Ishansh	Complete
Research & QA	PlantVillage dataset curation (100K+ images, verified). Mandi price baselines & crop-yield benchmarks from official govt sources. End-to-end testing with 10+ dummy farmer profiles. Slide deck & demo script.	Tavish	Complete
WhatsApp Bot	Zero-install farmer interface via WhatsApp API. Routes queries to AgriScore, CropDoctor & Schemes agents. Mass-adoption strategy for rural India with no smartphone app required.	Aryan	complete
Blockchain Layer	Smart contracts for tamper-proof farm activity records. Immutable ledger for loan & transaction history. Digital AgriScore credit identity. Regulatory audit trail.	Aryan	planned

COMPONENT	DESCRIPTION	OWNER	STATUS
FarmIntel B2B API	Real-time agri-data distribution to Govt, FMCG & insurers. 20M+ growing market. Farmer revenue-sharing module (5–10% ARR). Freemium-to-premium funnel integration.	Anirudha	Planned

ENVIRONMENTAL & SOCIAL IMPACT

30%
CROP LOSS REDUCTION
AI-based early detection eliminates irreversible damage from pests & disease

25%
WATER USE EFFICIENCY
Precision irrigation & AI soil monitoring cut water wastage by a quarter

50%
CHEMICAL INPUT REDUCTION
Optimized inputs reduce soil degradation and carbon emissions

2-3x
LOAN ACCESS
AgriScore replaces formal credit history — unlocking formal banking for 50–60% of farmers who depend on informal loans at 24–60% APR

TECHNOLOGY STACK

XGBoost · Scikit-Learn · TensorFlow 2.x · EfficientNetB0 CNN · PlantVillage Dataset · Google Colab GPU · Python 3.11 · FastAPI · Uvicorn · Kaggle Notebooks · Supabase PostgreSQL · supabase-py · @supabase/supabase-js · React 18 · Tailwind CSS · Axios · WhatsApp API · Blockchain / Smart Contracts · Vercel · Render · HANDY AI Edge Inference · IoT / Satellite Data
